1W-T-IB2 on-wall temperature sensor

A compact on-wall sensor for the 1-Wire bus, designed to measure temperature in building interiors.

Basic parameters

Sensor type	DS18B20
Temperature measurement range	-40 °C/+85 °C with +-2 °C tolerance
Connectioń	1-Wire (screw terminal)
Protection	IP30
Plastic box material	ABS plastic
Installation	Installation box (KU 68)
Dimensions	100 × 100 × 25 mm
Power supply	5 V (on connector along with 1-Wire)
Max. current draw	2 mA

Installation guide

- 1. Remove the plastic box cover held in place by four small plastic holders visible from the below.
- 2. Connect all conductors to the sensor's screw terminal according to the descriptions:
 - a. \leftarrow 1W: 1-Wire bus input
 - b. \rightarrow 1W: 1-Wire bus output
 - c. +5V: direct voltage positive pole*
 - d. GND: direct voltage negative pole*
- 3. Thread the wires out of the box through the circular opening in the backplate.
- 4. Re-assemble the sensor.

* On all Unipi controllers the corresponding voltage is available on a single connector along with 1-Wire data conductor.

Software

The sensor is fully compatible both with the <u>Mervis</u>, the officially supported SW platform for Unipi products, and the <u>EVOK</u>, an open-source application programming interface (API)

Mervis

For reading data from the sensor the Mervis IDE development environment contains *UNIPI_1W_TH* function block available in the Lib.Unipi library.

			194	program	
Add Box					×
Name: 1w					
Name	Namespace	Version	Module	Status	
UNICA_U1WT	lib.Unipi.Unica	v1_0	Lib.UniPi		
UNIPI_1W_TH	lib.Unipi	v1_0	Lib.UniPi		

evok

The sensor is detected automatically and be used right away. Measured values are accessible on an address of the particular sensor also serving as a device identification. You can find the address on a sticker provided with the product.

A request example: 192.168.221.78:8080/json/1wdevice/XYZ (XYZ = sensor address)
